

Native Warm Season Grass Workshop

Dry Soils, Hot Weather – Summer Slump??

Native Warm Season Grasses (NWSG) are highly productive, palatable perennial forages. Their amazing root systems allow them to thrive on low levels of nutrients and water. NWSG's provide many long-term benefits for farmers, livestock, wildlife, and the environment – yet they can be notoriously difficult to establish. Come hear more about the benefits of NWSG's and learn how to successfully establish and manage them.

Wednesday, Aug 19th

4:00-6:00 p.m.

Garrity Road, Lee NH

Register at www.grazenh.org

\$10 fee for non-members

Free for members

(On-line registration is encouraged, but on-site registration is also possible)
